

Logo brief

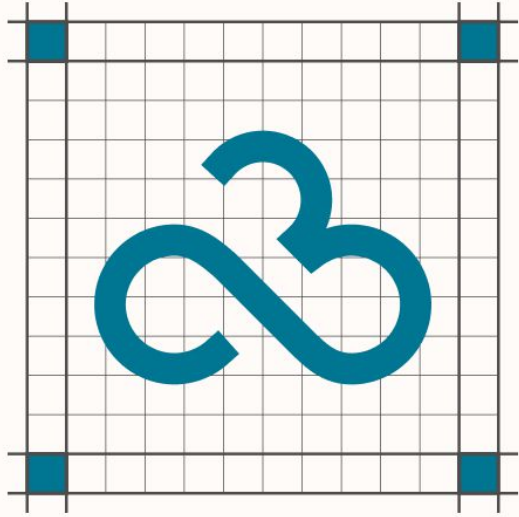

Project: Restido

About the project: Cloud restaurant business automation system. The system is suitable both for familiar establishments like a pizzeria or a coffee shop, and for projects like an anti-cafe or food trucks. The product allows you to automate order taking, inventory control, receipt printing, analyze sales statistics and work on loyalty programs. **Restido** integrates with online checkouts, and more importantly, allows restaurants to start delivery from scratch - a full-fledged delivery site with order acceptance is integrated into the system, which can be deployed in 15 minutes.

Restido

The logo shows an cloud. Restido is a cloud-based restaurant business automation system. A cloud is a first-level association - the most obvious connections that a person has instantly when he pays attention to an object or phenomenon. This will help us stand out from the competition.
