

CV of Junior Frontend Developer

Hello! I'm Seryozha Okhta, a **motion-3D designer** transitioning into a **junior developer** role.

Age: 27
Hometown: Saint Petersburg
Tbilisi, **Georgia**

[My website ↗](#) [My github ↗](#)

Programming

My coding journey involves learning **CSS**, **JavaScript**, **Java**, and **Python** with the goal of developing unique applications. An ongoing project is the Tbilisi Street Sign Generator, currently in beta, allowing me to apply my skills in SVG generation and API usage.

Skill set

Web Development and Design

Proficiency in 3D and 2D software (Cinema 4D, After Effects) combined with coding languages equips me to handle projects from 3D modeling to animation.

Art History and Scriptwriting

My educational background as an art historian from The Saint Petersburg Stieglitz State Academy of Art and Design propels me to create an interactive project aimed at making art history more engaging. This project, in its early stages, is a fusion of my skills in programming, design, and scriptwriting.

3D Design and Data Visualization

Furthermore, my experience in 3D design, **data visualization**, and scriptwriting provide a solid base for user experience design and information architecture.

As a potential **junior developer**, I intend to leverage my design skills and programming knowledge to create innovative tech solutions, bridging the gap between aesthetics and functional coding.
