Education

2018 - 2022

CNTU (Bachelor)

KIBERSECURITY

Skills

- Backend: Golang (REST API, gRPC, Goroutines, Multithreading), OOP, SOLID, Microservices
- Video: ffmpeg (transcoding, streaming, automation), multimedia formats
- Databases: MySQL, PostgreSQL (optimization, schema design, replication)
- Frontend: Angular, React (basic), HTML, CSS, TypeScript, JavaScript
- DevOps: Docker, Kubernetes, GitLab CI/CD, Nginx, SSL, SSH
- Linux: Ubuntu, Debian, Bash scripting, systemd
- Networking/Security: MikroTik, NAT, VPN, Firewall, IPTables/UFW, Fail2Ban, HTTPS, Let's Encrypt
- Monitoring: Prometheus, Grafana
- Cloud/Virtualization: AWS, DigitalOcean, KVM, VirtualBox
- Version Control: Git

Language

English (Intermediate)

Ukrainian (Native)

Russian (Native)

Experience

14.06.2024 – 01.09.2025

Adtelligent | adtech company

Back-end developer (Golang)

Developed and maintained backend services for ad insertion in video streams (HLS, MPEG-TS). Implemented SCTE-35 marker handling for dynamic ad stitching in live and VOD streams. Built Go services for managing ad pods, trackers, and creative rotation logic. Optimized stream continuity using PTS/DTS correction and continuity counters (CC). Created monitoring tools to detect black frames, freezes, and loudness spikes in video chunks. Automated deployment and validation of streams using CI/CD pipelines and FFmpeg tools. Configured CI/CD pipelines, integrated with Nginx, Docker, and logging systems.

19.02.2022 - 24.04.2024

We Deliver

Full-Stack Developer(Angular, Golang)

- Independently deployed and administered Ubuntu/Linux servers.
- Configured SSH access, SSL certificates, firewalls (iptables/ufw), domains, and Nginx for production.
- Connected and configured monitoring systems (Prometheus + Grafana).
- Set up deployment pipelines ensuring stable operation of microservices.
- Optimized network performance to improve backend service efficiency.
- Developed backend services in Golang for high-load microservice architecture, implementing REST and gRPC APIs, background workers, and integrations with third-party services.
- Created and maintained frontend applications using Angular, ensuring responsive UI, reusable components, and integration with backend APIs.
- Implemented CI/CD workflows for automated testing, building, and deployment of both frontend and backend projects.
- Collaborated with the team on architectural decisions, performance tuning, and security hardening.

2019 - 2022

Freelance

Frontend Developer

During my freelance experience, I worked on building and supporting various web projects, from landing pages to corporate websites. I created responsive interfaces using HTML, CSS (SCSS), and JavaScript (jQuery), and developed projects on WordPress, including theme customization, plugin integration, and performance optimization. I also worked with Angular and TypeScript, applying modular architecture and reusable components to deliver modern SPA applications. My responsibilities covered the full development cycle: communication with clients, gathering requirements, creating layouts, integrating APIs, delivering final solutions, and providing long-term support. This experience also included cross-browser testing, SEO optimization, website analytics, and more.
